

PRESS RELEASE

FrontierZero Signs Distribution Agreement with Cyber Shield to Expand SaaS & AI Security Across Saudi Arabia

Dubai, UAE — May 29th, 2025

FrontierZero, the SaaS security platform helping companies secure their SaaS and AI environments, has signed a new distribution agreement with **CyberShield**, a trusted Saudi Arabian cybersecurity solutions provider known for its expertise in regional compliance, identity protection, and enterprise risk mitigation.

Together, the two companies will expand access to FrontierZero's capabilities across the Kingdom, bringing **visibility-first SaaS security** to organizations under growing pressure to manage shadow IT, identity sprawl, and the risk of unmanaged AI usage. The partnership will also launch joint go-to-market initiatives, regional enablement efforts, and tailored support for compliance-driven sectors.

*"We're seeing growing interest across Saudi Arabia as organizations search for real-time control over their SaaS and AI stack," said **Karl McGowan**, Co-founder of FrontierZero. "CyberShield's deep local presence and trusted enterprise relationships make them the ideal partner to help deliver on that need."*

This collaboration comes at a pivotal moment for the Kingdom's cybersecurity landscape. As digital adoption accelerates, so too does the risk surface—from unauthorized SaaS logins to AI tools introduced without oversight. Enterprises are now expected to demonstrate compliance and control across every layer of their environment—something static tools and outdated audit cycles can't provide.

About CyberShield

CyberShield is a Saudi-based cybersecurity provider trusted by enterprises and government entities for its hands-on approach to cyber risk management and compliance. The company offers a comprehensive portfolio of solutions, including identity protection, endpoint security, threat detection, and regulatory advisory services tailored to the Kingdom's evolving digital landscape.

Specializing in sectors with complex compliance requirements, CyberShield helps organizations meet Saudi NCA guidelines while aligning with international frameworks like ISO 27001 and NIST. Their deep local expertise and practical, implementation-focused mindset make them a go-to partner for businesses navigating the challenges of rapid SaaS adoption and emerging AI threats. With a growing presence across high-impact industries, CyberShield continues to play a key role in shaping cybersecurity resilience in the Gulf region.

Why FrontierZero?

As organizations expand their use of SaaS and AI tools, the complexity of managing access, identities, and integrations grows exponentially. Every new app, account, and connection increases the chances of something slipping through the cracks—whether it's a forgotten admin login, a bot with excessive permissions, or an unapproved AI tool connecting to sensitive data.

FrontierZero was built to solve that problem.

FrontierZero gives organizations complete visibility into every identity, app, and integration across their SaaS environment. Unlike traditional security tools, which rely on snapshots or static rules, FrontierZero continuously monitors for real-time changes, so when something breaks, drifts, or looks suspicious, it's caught fast.

With FrontierZero, organizations gain:

- **Clear visibility into every identity, app, and connection**
Whether it's an employee, contractor, bot, or AI tool—we show you who has access, what they're doing, and what's no longer needed.
- **Smart alerts that highlight real risk**
We cut through the noise and surface what matters—missing MFA, unused admin rights, suspicious login behavior—so teams know where to act first.
- **Simpler audits, stronger compliance**
FrontierZero helps security teams track policy alignment, automate reporting, and reduce wasted SaaS spend—often saving teams up to 40% on unused licenses and tools.

Whether you're trying to meet regulatory expectations, prevent lateral movement, or finally get control of your SaaS sprawl—**FrontierZero delivers clarity when it matters most.**
