

PRESS RELEASE

FrontierZero Partners with Ensor MSP to Bring SaaS & AI Security to UK Mid-Market Enterprises

Dubai, UAE — June 5th, 2025

FrontierZero, the SaaS security platform helping companies secure their SaaS and AI environments, has partnered with Ensor, a UK-based managed service provider known for its hands-on approach to IT, cybersecurity, and digital transformation for mid-sized businesses.

The partnership aims to bring visibility-first SaaS and AI security to a broader range of UK companies—especially those facing fast-growing SaaS stacks, limited internal resources, and increasing compliance pressure. FrontierZero's platform will now be available through Ensor's managed services portfolio, offering clients real-time visibility, identity-level monitoring, and compliance-ready controls without the complexity of traditional enterprise tooling.

"UK businesses aren't short on SaaS tools—they're short on time, visibility, and people to secure them," said Karl McGowan, Co-founder of FrontierZero. "Ensor MSP understands that. Their focus on simplifying security and operations for growing companies makes them the perfect partner to deliver FrontierZero to a broader market."

The collaboration will also include co-branded enablement initiatives, customer success resources, and strategic workshops to help mid-sized organizations improve SaaS hygiene, reduce shadow IT risk, and prepare for new AI-related compliance mandates.

About Ensor MSP

[Ensor MSP](#) is a UK-based managed service provider offering tailored IT, cloud, and cybersecurity solutions to small and mid-sized businesses. With a reputation for hands-on support and long-term client partnerships, Ensor helps companies navigate complex technology landscapes with confidence. From endpoint protection and managed detection to SaaS management and compliance support, Ensor serves as a trusted advisor for clients looking to scale securely. Their practical, people-first approach is what sets them apart, ensuring that security, performance, and operational needs are all met without unnecessary complexity.

"Our clients rely on us to simplify complex problems—SaaS security is no different. As tools and integrations grow, so does the risk surface. Partnering with FrontierZero has given us the visibility and control needed to help our customers stay ahead of issues like shadow IT, identity sprawl, and high-risk account access - without adding more noise or overhead."

— Phil Norse, Director, Ensor MSP

Why FrontierZero?

As organizations increase their reliance on SaaS and AI tools, the complexity of managing access, identities, and integrations grows exponentially. Every new app, connection, and user increases the risk of something slipping through the cracks—be it an orphaned account, misconfigured integration, or unauthorized AI tool feeding on sensitive data.

FrontierZero was built to close that visibility gap.

[FrontierZero](#) gives companies a full, real-time view of every SaaS identity and connection—whether human, bot, or AI. Unlike static audit tools, FrontierZero continuously monitors for drift, misconfigurations, and unusual behavior so teams can act before risks escalate.

With FrontierZero, organizations gain:

- **Live visibility into every SaaS identity and integration**
Know who has access, what they're doing, and where excess risk is hiding.
- **Intelligent alerts that prioritize what matters**
Cut through the noise and catch problems like missing MFA, unused admin rights, or suspicious login behavior fast.
- **Simplified audits and cleaner SaaS spend**
Track access policy alignment, automate reporting, and eliminate unused tools—saving up to 40% on wasted SaaS spend.

Whether you're managing 50 apps or 500, FrontierZero helps make SaaS security manageable, measurable, and proactive.
