

PRESS RELEASE

FrontierZero Partners with Pillar Group Advisory to Deliver Identity-First SaaS Security to GCC Enterprises

Dubai, UAE — July 17, 2025

FrontierZero, the SaaS security platform helping organizations secure their SaaS and AI environments, is proud to announce a strategic partnership with **Pillar Group Advisory**, a UAE-based advisory firm specializing in cybersecurity, risk management, and compliance for BFSI, family offices, critical infrastructure, telecom, and government.

This partnership brings **FrontierZero's real-time SaaS visibility, credential monitoring, and dark web correlation** to Pillar Group's client base, many of whom operate in **heavily regulated, high-risk environments** where control and context are non-negotiable.

Together, **FrontierZero** and **Pillar Group Advisory** will co-deliver tailored security assessments, advisory-led implementations, and ongoing support to enterprises across the UAE and broader GCC region.

"We're seeing a shift in the region—from securing perimeters to securing identities," said **Karl McGowan**, Co-founder of FrontierZero. "Pillar Group's deep domain expertise in governance and risk, paired with their presence in sectors that demand airtight compliance, makes them the perfect partner to deliver our identity-first approach."

About Pillar Group Advisory

Pillar Group Advisory is a UAE-based advisory firm focused on cybersecurity, digital resilience, and risk strategy. With clients across family offices, BFSI, defense, telco, and government sectors, Pillar Group helps organizations build long-term security maturity, grounded in business outcomes and regional best practices.

Their team brings experience across **GRC frameworks, cyber maturity modeling, digital forensics, and compliance mandates like UAEIA, SAMA, NCA, ISO, and NIST**. From CISO advisory, Fractional C-Suite services to incident response readiness, Pillar Group helps clients stay ahead of today's dynamic threat landscape.

"Our clients are expanding their SaaS footprints—but without the same visibility or controls they've built on-prem," said **Glen Thomas**, Senior Managing Director at Pillar Group Advisory. "We've seen critical gaps: shadow AI tools, unmonitored access, identities with more privileges than necessary. FrontierZero brings that visibility, along with the context needed to respond intelligently, not reactively."

Why FrontierZero?

As enterprises adopt more SaaS and AI tools, they inherit a new type of risk—**invisible identity sprawl**. Accounts go unmonitored. Admins change roles without losing access. Third-party AI tools connect to sensitive data without proper review.

FrontierZero was built to solve this.

Unlike legacy tools that rely on logs or snapshots, **FrontierZero continuously monitors identity, behavior, and access across your entire SaaS stack**, surfacing real risk in real time.

With FrontierZero, organizations gain:

- Visibility into every identity, OAuth connection, and third-party access
- Context-aware detection of risky behaviors like excessive permissions or token reuse
- Dark web monitoring for breached credentials tied to your environment
- Support for compliance across ISO 27001, NCA, SOC 2, and more

Whether you're trying to secure AI tools, reduce lateral movement, or meet regional compliance requirements, FrontierZero gives you clarity when it matters most.
