

PRESS RELEASE

FrontierZero Partners with 4FRONT Technologies to Strengthen SaaS and Identity Security Across the UAE

Dubai, UAE, March 24th, 2026

FrontierZero, the SaaS security platform helping organizations secure their SaaS and AI ecosystems, today announced a strategic partnership with **4FRONT Technologies**, a UAE-based technology company delivering digital and cybersecurity solutions to enterprises across the region. The partnership will help organizations improve visibility into SaaS environments, reduce identity risk, and strengthen security across increasingly complex cloud ecosystems.

A Partnership for Modern SaaS Security

As organizations across the UAE accelerate SaaS adoption, new risks are emerging around identity access, shadow integrations, and third-party exposure. Many companies rely on dozens of SaaS applications but lack clear visibility into who has access and how those systems connect.

Through this partnership, **4FRONT Technologies will integrate FrontierZero's SaaS security platform into its portfolio**, enabling customers to monitor SaaS activity, detect risky behavior, and strengthen identity security without disrupting existing workflows.

“Organizations today rely on SaaS to move faster, but that also creates new security blind spots,” said **Karl McGowan, Co-founder of FrontierZero**. “Partnering with 4Front Tech allows us to bring deeper SaaS visibility and identity intelligence to organizations across the UAE.”

“Most organisations have far more SaaS applications and identity access points than they realise,” said Guill Roux, Managing Director / Technical Director at 4FRONT Technologies. “Working with FrontierZero allows us to give our customers clear visibility into those environments, identify risk quickly, and secure SaaS platforms properly as part of a broader cybersecurity strategy.”

Addressing SaaS Visibility Gaps

The joint solution helps organizations identify hidden risks within SaaS environments by providing:

- Visibility into connected SaaS applications and integrations
- Monitoring of external accounts and third-party access

- Detection of risky identity behavior and unusual logins
- Identification of shadow IT connected through SSO
- Early alerts for compromised credentials tied to SaaS accounts

By combining **4FRONT Technologies' regional expertise** with **FrontierZero's SaaS-native platform**, organizations gain the insight needed to secure modern digital environments.

About 4FRONT Technologies

[4FRONT Technologies](#) is a Dubai-based enterprise technology company delivering infrastructure, cloud, cybersecurity, and managed IT services to organisations across the Middle East. The company specialises in helping businesses design and operate secure, scalable technology environments that support regional growth and digital transformation.

Through advisory, deployment, and ongoing managed services, 4FRONT enables organisations to modernise their IT operations while maintaining strong security and operational resilience.

About FrontierZero

[FrontierZero](#) is a UAE-built cybersecurity platform that helps enterprises secure SaaS and AI ecosystems through continuous visibility, identity intelligence, and automated compliance. The platform detects risky behavior, third-party exposure, and credential compromise to help organizations control SaaS sprawl and reduce identity risk.
